CORRIDORS COMMUNICATIONS

Planning and Strategy Document

Version 1.1 · Issued 25 April 2026 · CRC umbrella aligned

Supersedes: COGS Community Communications v1.0 (Mobile-only draft)

A direct Member-benefit communications programme covering Mobile, NBN and wholesale Data from the initial phase, delivered through a single wholesale partnership with Partner Wholesale Networks (PWN).

Governing Law: South Australia, Australia

Drake Village, NSW 2469 · Wahlubal Country, Bundjalung Nation

PART 1 — PURPOSE, SCOPE AND RENAMING

1. Purpose

1.1 This document is the planning and strategy document for Corridors Communications, the Communications-branch programme of the COGS Resource Corridors (CRC) framework and the Foundation's first Member-benefit programme. It delivers mobile voice, mobile data, fixed-line NBN internet, and business-grade wholesale data services as a single integrated product family, through one wholesale commercial partnership with Partner Wholesale Networks Pty Ltd (PWN).

1.2 This document supersedes two earlier scoping iterations: the original mobile-only "Community Mobile" draft, and the v1.0 "Community Communications" expansion that added NBN and wholesale data from day one. v1.1 applies the COGS Resource Corridors umbrella branding without changing substantive content. Phase 1 product scope (Mobile + NBN + Data + Voice via PWN) and the in-scope-from-day-one principle for NBN remain unchanged.

Reason for the change

PWN is a full-spectrum wholesale network partner — a single Virtual Network Operator relationship giving the Foundation access to mobile (Telstra and Optus), NBN (FTTN, FTTB, FTTP, Fixed Wireless, HFC), business wholesale data (Ethernet, MPLS, Fibre, Fixed Wireless), voice and IoT, under one partner agreement, one billing platform, one customer service framework, and one TIO/ACMA compliance perimeter. Sequencing mobile-only first and NBN/data as a Phase 7 expansion would duplicate the PWN onboarding work, complicate the Member experience, and leave First Nations and regional Members — the people who most need reliable home internet — waiting eighteen months for a product that is already available to be launched on the same day as mobile. The corrective move is to launch Communications as one product family from the first pilot.

2. Scope

2.1 Phase 1 is a combined mobile-and-fixed-line resale programme. The Foundation operates as the Carriage Service Provider (CSP) on the Member contract. PWN is the wholesale aggregator. No separate Foundation trading entity is required at the pilot stage.

2.2 Product scope at Phase 1 covers four product lines under one Member-benefit brand:

Product line	Scope
Community Mobile	Telstra and Optus MVNO SIMs with voice, SMS and mobile data. Bring-your-own-device default; simple handset supply optional.
Community NBN	Fixed-line home internet via NBN across FTTN, FTTB, FTTP, Fixed Wireless and HFC access technologies, at speeds that match the connection type available at each premises.
Community Data	Business-grade wholesale data (Ethernet, MPLS, Fibre, Business-Grade NBN, Fixed Wireless) for Member businesses, community centres, and JLALC/FNAC-nominated facilities. Conditional on demand.
Community Voice	Home and business landline via SIP/VoIP, number porting supported.

Product line	Scope
	Offered on request — not pushed as a primary product in Phase 1.

2.3 IoT, Unified Communications (UC7), and hardware resale remain explicitly out of Phase 1 scope. They are on the roadmap for later phases once the Phase 1 product family is operating at steady state.

2.4 Geographic phasing follows the established pattern: Phase 1 pilot at Jubullum, Drake and Tabulam; Phase 2 NSW-wide; Phase 3 national to wherever PWN coverage reaches the Member.

3. Why this matters for the pilot communities

3.1 Drake, Tabulam, and Jubullum are regional NSW communities. Mobile coverage is mixed; fixed-line connectivity at Jubullum and the smaller premises around Drake and Tabulam is limited, patchy, or dependent on NBN Fixed Wireless or Sky Muster satellite. For many Members in the pilot communities, the home internet conversation is at least as important as the mobile one.

3.2 A communications programme that launches mobile first and fixed-line later sends the wrong signal at the wrong time. Launching both from day one says plainly that the Foundation expects Members in regional communities to have the same quality of digital access as anyone else on Wahlubal Country, and that the Foundation is willing to do the commercial and logistical work to deliver it.

3.3 PWN's no-POI-based NBN pricing — the same wholesale price regardless of the Member's location in Australia — is particularly relevant for regional Members. It means the Foundation can offer a single Community NBN price to Jubullum Members, Drake Members, and Sydney Members alike. Remote-area cost penalties that typically push regional NBN pricing higher do not apply at the wholesale layer.

4. Alignment with existing Foundation programmes

4.1 Corridors Communications uses the same three-tier structure (Community Basic, Community Standard, Community Supported) and the same 15% COG$ services-fee characterisation as Community Electricity and Community LPG, with Sub-Trust C funding the Supported tier and GST treated on flow-through as community infrastructure support and capability-building.

Element	Established pattern (Electricity, LPG)	Corridors Communications
Partner	Localvolts; Supagas	Partner Wholesale Networks (PWN)
Product scope	Electricity supply; LPG cylinders/bulk	Mobile + NBN + Data + Voice under one wholesale account
Foundation role	Services overlay (Electricity); commercial account holder (LPG)	Carriage Service Provider — the Foundation is on the Member contract
Regulatory perimeter	AER-authorised retailer (partner); dangerous-goods licence (partner)	TIO membership, ACMA CSP registration, IPND reporting — held by the Foundation
Tier structure	Basic / Standard / Supported	Basic / Standard / Supported
15% COG$ services fee	Applied to AUD bill total	Applied to AUD Member

Element	Established pattern (Electricity, LPG)	Corridors Communications
		contribution across all communications products for the period

4.2 The Carriage Service Provider positioning is material. Unlike Electricity (where Localvolts is on the retail contract directly) and LPG (where the Foundation is a wholesale account customer and the Member buys from the Foundation), Communications has the Foundation as the named CSP on the Member contract. That produces regulatory obligations the Foundation takes on directly: TIO membership, ACMA CSP registration, IPND, life-line obligations for fixed services, and the telecommunications-specific privacy and data-retention regime.

4A. Branch placement under the CRC umbrella

4A.1 This programme is the Communications branch programme of the COGS Resource Corridors (CRC) framework. CRC is the umbrella structure under which all Foundation Member-benefit programmes are governed; it is documented in the COGS Resource Corridors Master Strategy and Governance v1.0. The CRC umbrella is the authoritative reference for the common substrate (Member identity, COG$ mechanics, Sub-Trust C three-tier pattern, Godley ledger, evidence vault, FNAC governance, Phase 0 discipline) on which this programme operates. Wherever this document refers to an established Foundation pattern, the CRC document is the source of that pattern.

4A.2 The Communications branch covers programmes that move connectivity — voice, messaging, data, internet — to and between Members. As of the date of this document, Corridors Communications is the only programme in the Communications branch. Future Communications branch programmes (community radio or podcast distribution; IoT connectivity for Member-owned devices; UC7 for Member businesses; future satellite broadband aggregation) are listed in the CRC document and would be planned through their own programme-level documents under this same branch.

4A.3 Cross-branch integration: as the Foundation's connectivity layer, this programme provides the platform-access path for every other CRC programme. A Supported-tier Communications service to a Jubullum Member is also that Member's access to the Energy and Transport interfaces, and to Foundation governance more broadly. This is structural rather than transactional, but it is the most material cross-branch dependency in the CRC framework.

4A.4 Naming: the CRC umbrella name is the working name pending FNAC, JLALC, and Wahlubal Elder concurrence on the Foundation's preferred long-term "Songlines" framing. This programme's public-facing branding follows the umbrella decision. Engineering identifiers (corridors_* / CORRIDORS-COMMS-*) are permanent regardless of the umbrella branding outcome.

PART 2 — COMMERCIAL MODEL

5. Plain-language description

5.1 The Foundation holds a wholesale partner agreement with PWN covering mobile, NBN, data, and voice. PWN provides the network, the billing back-office, the provisioning systems, and the customer-service platform to the Foundation under a fee-for-service model. The Foundation provides the Member brand, the Member relationship, the eligibility and tier assignment for subsidy purposes, and the COG$ and Sub-Trust C overlay.

5.2 Each Member takes up the products they want: a SIM only; a SIM plus NBN; NBN only; business data only; or any combination. The Foundation invoices the Member monthly on a single combined invoice covering all Member communications products, with the 15% COG$ services fee calculated on the AUD total of the invoice.

6. Tier structure

Tier	Member experience	Funding and constraints
Community Basic	Bring-your-own-device SIM with small mobile data allowance; NBN entry-speed tier at cost. 15% COG$ services fee on AUD total.	No Sub-Trust C draw. Modest Class C COG$ offset against services fee line.
Community Standard	Larger mobile data allowance; NBN standard or fast tier at cost; priority provisioning.	No Sub-Trust C draw. Larger Class C offset available.
Community Supported	Zero or near-zero AUD for core mobile + NBN bundle. Sub-Trust C funds the AUD leg to PWN.	Eligible: First Nations Members, concession holders, Pay It Forward recipients, persons under state care.

6.1 The Supported-tier design is the most operationally significant piece of the programme. Delivering a First Nations Member in Jubullum a working mobile service and a working home internet service at near-zero net cost is a direct operational expression of Class C Community COG$ and the entrenched 30% First Nations Sub-Trust C allocation under clause 27.3(d). That delivery is what the programme is for.

7. Worked example — Supported-tier Member in Jubullum

7.1 Using an indicative Community Standard bundle (mobile SIM with moderate data, NBN 50 or FW connection) at a PWN wholesale cost to the Foundation of approximately $70 AUD per month total, combined:

Flow	Basic	Standard	Supported
Member to Foundation (AUD)	~$50/mo	~$80/mo	$0/mo
Sub-Trust C to Foundation (AUD)	$0	$0	~$70/mo
Foundation to PWN (AUD)	~$40/mo	~$70/mo	~$70/mo

Flow	Basic	Standard	Supported
15% COG$ services fee	7.50 COG$	12.00 COG$	10.50 COG$
Member pays fee (COG$ cash)	7.50	12.00	0 (drawn or waived)

7.2 Indicative pricing only. Actual numbers come from the PWN rate card and Foundation Board-approved tier pricing in Phase 3. The example illustrates the flow shape, not the final product pricing.

8. GST and AML/CTF

8.1 GST treatment follows the Foundation's established posture: the 15% COG$ services fee flows through Sub-Trust C as community infrastructure support and capability-building, and GST is not charged on the COG$ leg. The AUD leg follows standard telecommunications GST treatment — PWN issues GST-compliant tax invoices to the Foundation, and the Foundation's on-supply to the Member follows the GST posture confirmed in Phase 0 ATO advice.

8.2 AML/CTF: AUSTRAC registration is proceeding as required on the Foundation's own timeline. SIM identity verification (legally required under the Telecommunications (Service Provider — Identity Checks for Pre-paid Public Mobile Telecommunications Services) Determination 2017) is integrated with the existing Member KYC perimeter. NBN and fixed data services do not carry the same identity-check obligation as pre-paid mobile but are covered by the same Member KYC baseline.

PART 3 — PWN PARTNERSHIP

9. Why PWN is the right partner for both mobile and NBN/data

9.1 PWN is an established independent Virtual Network Operator that has launched over 200 telcos since 2007. The partnership covers the full product suite the Foundation needs for Communications:

- **Mobile.** Telstra and Optus MVNO access under PWN's wholesale arrangements. Full suite of voice, SMS, mobile data, roaming.
- **NBN.** All access technologies (FTTN, FTTB, FTTP, Fixed Wireless, HFC). Critically, PWN pricing is not POI-based — the Foundation pays the same wholesale rate regardless of where the Member is in Australia. Business-grade NBN also available for Member businesses and community centres.
- **Data.** Ethernet (over copper or fibre), MPLS, Fibre internet, Fixed Wireless access. Suitable for Member businesses and shared community facilities that need more than a residential NBN connection.
- **Voice.** SIP trunks, hosted PBX, number porting, inbound services (1300/1800/13). Offered on request for Member businesses.
- **Back-office.** PWN provides provisioning, customer service, billing and collections platform under a fee-for-service model, branded to the Foundation.

10. The single-partner advantage

10.1 Consolidating mobile and fixed-line under one partner is the dominant commercial and operational consideration. A dual-partner arrangement (say, PWN for mobile and a different NBN wholesaler) would produce: two wholesale partner agreements to negotiate and maintain; two rate cards to track; two billing systems to reconcile into a single Member invoice; two provisioning systems to integrate into the Foundation onboarding flow; two escalation paths for Member complaints; and two sets of carrier-grade compliance interfaces. PWN's single-partner model eliminates all of this.

10.2 The single-partner structure also gives the Foundation commercial leverage. A wholesale spend that combines mobile, NBN, and data across the full Member fleet is larger than a mobile-only spend. PWN's pricing tiers reward volume; the Foundation gets better unit pricing on mobile by bundling NBN and data under the same account.

11. What the Foundation asks for from PWN

- A wholesale partner agreement covering mobile (Telstra and Optus), NBN (all access types), wholesale data, and voice.
- A single account manager at PWN as the Foundation's primary commercial contact.
- Foundation-branded customer-facing interfaces (billing, provisioning confirmations, support portal).
- Access to the PWN partner portal and order-placement systems for aggregated Member onboarding.
- A combined rate card covering all four product lines.
- Wholesale partner model (not dealer/agent model) — the Foundation is the CSP on the Member contract.

12. Regulatory perimeter

12.1 As the CSP on the Member contract, the Foundation holds the direct regulatory relationship for each Member communications service. The perimeter is larger than for Electricity (where Localvolts carries the retail licence) or LPG (where Supagas carries the dangerous-goods licence). The Foundation's direct obligations are:

Obligation	Description
TIO membership	Telecommunications Industry Ombudsman membership is a legal requirement for CSPs. Membership fees are based on customer numbers; Phase 1 pilot scale attracts the lowest tier.
ACMA CSP registration	Registration with the Australian Communications and Media Authority as a Carriage Service Provider.
IPND submission	Integrated Public Number Database — the Foundation must submit and maintain Member number records for emergency-services look-up.
SIM identity checks	Pre-paid mobile identity-check obligations under the 2017 Determination; integrated into Foundation KYC.
Life-line obligations	For fixed-line services at premises with declared priority assistance needs, backup-power and service-continuity obligations apply. IPND flags these.
Privacy and data retention	Telecommunications-specific privacy rules (Part 13 Telecommunications Act 1997) and the metadata retention regime (Telecommunications (Interception and Access) Act).
Consumer protection	Telecommunications Consumer Protections Code (TCP Code) compliance — advertising, contract terms, financial hardship, complaint handling.
Priority Assistance	The Foundation is not a Priority Assistance provider; Members with medical priority needs remain with Telstra for that service where applicable. This is disclosed at onboarding.

12.2 PWN provides significant operational support for these obligations (billing that complies with the TCP Code, IPND submission tooling, SIM activation identity-check flows). The Foundation remains legally accountable as the CSP.

PART 4 — PHASE 0 AND TIMELINE

13. Phase 0 checklist

13.1 Phase 0 closes on a signed Trustee Decision Record. The checklist is adapted from the Community Mobile draft to cover both mobile and NBN/data from the outset.

#	Item	Success condition
1	Trustee decision record authorising Corridors Communications scope under the CRC umbrella, including the rename from Community Mobile, the inclusion of NBN/data from Phase 1, and the v1.1 alignment to CRC branding	Signed TDR filed
2	FNAC concept engagement; JLALC briefing with specific emphasis on home-internet need at Jubullum	Written FNAC and JLALC responses on file
3	Coverage ground-truth test at Drake, Tabulam, Jubullum — both mobile coverage AND NBN technology/premises eligibility check	Coverage map for each community; list of NBN-addressable premises per community
4	GST and tax advice on the 15% COG$ services fee and the combined-product AUD on-supply	Written advice on file
5	Legal review of CSP positioning, TCP Code posture, and combined-product characterisation	Written legal opinion on file
6	AML/CTF advice refresh covering combined mobile + NBN + COG$ flow	Written confirmation on file
7	TIO membership application lodged and accepted	TIO member number issued
8	ACMA CSP registration completed	ACMA registration confirmation on file
9	PWN commercial engagement — combined-product rate card; partner agreement covering mobile, NBN, data, voice; account manager assigned	Executed partner agreement; combined rate card on file

#	Item	Success condition
10	Insurance review — professional indemnity and cyber liability appropriate to CSP operations	Cover confirmed or endorsement completed
11	Community information briefings at Drake, Tabulam, Jubullum — framed around the combined communications offer	Attendance recorded; questions logged
12	Phase 0 closure decision record	Signed TDR authorising Phase 1 commencement

14. Eight-phase timeline

14.1 The timeline absorbs the NBN/data inclusion without adding any phase relative to the earlier mobile-only draft. The phases that would have been Phase 7 NBN/IoT expansion candidates in the superseded draft are dissolved into Phase 1 and Phase 5.

Phase	Window	Content
Phase 0 — Readiness	May–Jul 2026	Phase 0 checklist above. Includes both mobile and NBN coverage/ground-truth work.
Phase 1 — PWN combined partnership	Jun–Jul 2026	PWN partner agreement covering mobile, NBN, data, voice. Combined rate card. Account manager assigned. Technical integration scoping.
Phase 2 — Regulatory perimeter	Jul 2026	TIO membership; ACMA CSP registration; IPND onboarding; SIM ID integration with Member KYC; TCP Code compliance documentation; privacy notice update covering telecommunications-specific obligations.
Phase 3 — Product design and Board-approved rules	Jul–Aug 2026	Three tiers across mobile, NBN, and combined bundles. Board-approved Class C rules — earning mechanisms, subsidy ratio, per-Member monthly cap across all communications products.
Phase 4 — Accounting integration	Aug 2026	New Godley accounts: CORRIDORS-COMMS-AR, CORRIDORS-COMMS-AP, CORRIDORS-COMMS-REV, CORRIDORS-COMMS-SUBSIDY, CORRIDORS-COMMS-OFFSET-CLEARING. Class C burn entries integrated with combined-invoice billing.
Phase 5 — Platform build	Aug–Sep 2026	/services/corridors/communications/ Member-facing module covering mobile + NBN + data orders; /admin/corridors/communications/ back-office with combined-provisioning workflows; evidence vault anchoring for all product types; PWN API integration.

Phase	Window	Content
Phase 6 — Soft launch	Oct–Nov 2026	Pilot cohort of 20–40 Member premises across Drake, Tabulam, Jubullum. Each Member onboarded with their chosen combination of mobile and NBN products from day one. At least 5 premises in Jubullum specifically include NBN.
Phase 7 — General availability	Q1 2027 onward	NSW-wide, then national. Monthly published reporting. 6-month review of operating model. IoT and Unified Communications (UC7) considered as true expansion candidates at this point, not NBN/data (which are already live).

15. What has changed from the earlier draft

15.1 For transparency, the specific changes from the superseded Community Mobile draft are:

- **Programme name:** Community Mobile → Corridors Communications (Communications branch under CRC umbrella).
- **Phase 1 scope:** Mobile-only → Mobile + NBN + Data + Voice combined under a single PWN partner agreement.
- **Coverage test (Phase 0):** Mobile coverage only → Mobile coverage plus NBN premises-eligibility check for each pilot community.
- **Product design (Phase 3):** Three mobile tiers → Three combined tiers spanning mobile and NBN products.
- **Godley accounting (Phase 4):** CORRIDORS-COMMS-* accounts → COMMUNITY-COMMS-* accounts. (Discipline note: if the earlier draft's accounts have already been seeded into the stewardship_accounts table, they are renamed via a schema migration; if not yet seeded, they are created fresh with the new key.)
- **Platform build (Phase 5):** /services/mobile/ → /services/corridors/communications/ with submodules for mobile and NBN; /admin/mobile/ → /admin/corridors/communications/ similarly.
- **Phase 7 content:** “nbn and IoT expansion candidates” → “IoT and UC7 expansion candidates” (NBN is now a Phase 1 core product).

PART 5 — PLATFORM BUILD AND ACCOUNTING

16. Module structure

16.1 Two top-level directories cover the programme, with internal submodules separating mobile and NBN/data product workflows:

Path	Purpose
/services/corridors/communications/	Member module. Sub-sections: /mobile/ (SIM ordering, number porting, plan management); /nbn/ (address lookup, plan selection, activation tracking); /data/ (business data enquiry and order for Member businesses); /bills/ (combined invoice view).
/admin/corridors/communications/	Back-office. Cohort view across all Member services; PWN order placement; provisioning status; IPND reporting; TIO case log; ACMA compliance calendar; subsidy processing; services-fee run; support cases.

17. Database schema additions

Table	Purpose
comms_member_accounts	One row per Member participating in the programme (Member-level, not service-level). Columns: member_id, tier, primary_address, onboarded_at.
comms_services	One row per active service (SIM, NBN connection, data circuit). Columns: member_id, service_type ENUM('mobile','nbn','data','voice'), product_code, service_identifier (msisdn/NMI-equivalent/circuit_id), pwn_service_ref, activated_at, ceased_at, status.
comms_products	Product catalogue covering all four product lines. Columns: product_code, product_line, description, pwn_product_code, monthly_aud_cents_net, monthly_aud_cents_gross, active.
comms_invoices	Combined monthly invoices. Columns: member_id, period_start, period_end, total_aud_cents, pwn_billing_ref, issued_at, paid_at.
comms_services_fees	Foundation 15% COG$ invoices. Columns: member_id, invoice_id, fee_cogs_cents, issued_at, settled_at, class_c_offset_applied, waiver_reason.
comms_subsidies	Sub-Trust C AUD payments for Supported-tier Members. Columns: member_id, invoice_id, aud_cents, stc_transfer_ref, transferred_at.
comms_ipnd_records	IPND submission records. Columns: service_identifier, record_type, submitted_at, acknowledgement_ref.

Table	Purpose
comms_tio_cases	TIO case log (internal-only, separate from the internal Member support case log).
comms_support_cases	Member support case log.

17.1 The comms_services table is the key design choice: one Member can hold multiple services (a SIM, an NBN connection, a data circuit) and each has its own provisioning state, activation date, and pwn_service_ref. Invoices aggregate across all services for the period.

18. Godley accounting integration

Account key	Purpose
CORRIDORS-COMMS-AR	AR — 15% COG$ services fees invoiced.
CORRIDORS-COMMS-REV	Revenue — 15% COG$ services fees settled.
CORRIDORS-COMMS-AP	AP — PWN invoices payable in AUD.
CORRIDORS-COMMS-COST-PASSTHROUGH	Clearing — AUD collected from Members and paid to PWN. Net-zero under on-supply/agency framing.
CORRIDORS-COMMS-SUBSIDY	Expense — Sub-Trust C AUD paid to PWN for Supported-tier Member services.
CORRIDORS-COMMS-OFFSET-CLEARING	Clearing — Class C COG$ offsets applied to services-fee invoices.

18.1 This account set supersedes any earlier CORRIDORS-COMMS-* accounts that may have been drafted in the mobile-only scoping. A straight key-rename migration is the clean approach; full double-entry flows are documented in a Phase 4 ledger-flows update.

19. PWN API integration

19.1 PWN provides a partner portal and integration interfaces for aggregated order placement, provisioning status, and billing extract. Phase 5 build wires these into the Foundation platform so that Member onboarding → PWN order → provisioning confirmation → bill issuance flows end-to-end without manual re-keying. Specific API endpoints and interface contract to be confirmed with PWN's technical team during Phase 1 commercial engagement.

PART 6 — RISKS, CROSS-HUB, READINESS

20. Risk register (condensed, highlighting changes from mobile-only draft)

Risk	Description	Lik.	Imp.	Mitigation
NBN addressability gap	Pilot premises at Jubullum that PWN/NBN cannot connect (satellite-only or no current service).	M	M	Phase 0 coverage test includes NBN premises check; Fixed Wireless and Sky Muster fallback options identified; Members without addressable NBN offered mobile-only until resolved.
CSP regulatory burden	TIO, ACMA, IPND, TCP Code, Part 13 privacy, metadata retention — larger perimeter than Electricity or LPG.	M	H	PWN operational support for most obligations; dedicated compliance section in admin; legal review in Phase 0; staged pilot keeps scale manageable while processes bed in.
Life-line / priority assistance confusion	Member or family member assumes the Foundation provides Priority Assistance for medical need.	L	H	Explicit onboarding disclosure that the Foundation is not a Priority Assistance provider and referral pathway to

Risk	Description	Lik.	Imp.	Mitigation
				Telstra for Members with medical priority.
PWN combined-product delivery friction	Mobile side fine but NBN provisioning slow, or vice versa.	M	M	Combined-product SLA built into PWN partner agreement; separate provisioning tracking per service; Member visibility of each service's status.
Billing integration complexity	Combining multiple services into one invoice produces reconciliation edge cases.	M	M	Conservative Phase 6 soft-launch scale; reconciliation dashboard monitored closely for the first six months.
SIM identity check scale	Identity-check obligations at scale are operationally intensive.	M	M	Leverage existing Member KYC; PWN provides the activation-gate tooling; pilot scale 20–40 Members manageable.
Wholesale rate change by PWN	PWN adjusts combined rate card after partnership signed.	L	M	Partnership agreement includes notice periods for rate changes; Foundation Board retains power to adjust Member pricing.

Risk	Description	Lik.	Imp.	Mitigation
Mobile coverage gap	Member location has patchy Telstra or Optus coverage.	M	L	Phase 0 coverage test; Member choice of network (Telstra or Optus) offered at SIM selection.
Metadata retention compliance	Data retention obligations under the TIA Act.	L	H	Obligation mostly met by PWN's carrier-grade systems; Foundation holds minimum retention records; annual compliance review.
TIO case volume	Complaint volume higher than expected at soft launch.	M	L	TIO membership fee tier adjusted by scale; internal case triage process in place; root-cause review after each TIO case.

21. Fallback partner candidates

21.1 PWN is the primary partner. Alternative wholesale partners surveyed in contingency (not actively engaged in Phase 1) include:

- **Aggregato / MyNetFone wholesale.** Voice-heavy but does mobile and NBN wholesale.
- **Symbio (Superloop).** Strong NBN and voice wholesale; mobile coverage via partnerships.
- **Vonex wholesale.** Smaller but MVNO and NBN capable.

21.2 Splitting mobile and fixed-line across two wholesale partners in a fallback scenario would be workable but structurally inferior to the single-partner PWN arrangement. It is not the preferred path.

22. Cross-hub governance

Hub	Touchpoint
First Nations	FNAC endorsement; JLALC liaison on Jubullum NBN and mobile coverage; FPIC-style engagement with communities for any community-centre service onboarding.
Financial Oversight	PWN combined wholesale reconciliation; Sub-Trust C draw for Supported-tier; 15% services-fee run; combined-product GST treatment; TIO membership fees.
Day-to-Day Operations	PWN account manager relationship; TIO case log; ACMA compliance calendar; IPND maintenance; life-line disclosure process; Member support runbook covering all product lines.
Technology and Blockchain	/services/corridors/communications/ and /admin/corridors/communications/ modules; PWN API integration; IPND submission tooling; evidence-vault anchoring of orders, activations, invoices, subsidies, TIO cases.
Place-Based Decisions	Drake, Tabulam, Jubullum coverage testing for BOTH mobile and NBN; community information briefings framed around the combined offer.

23. Confirmation items

23.1 Four items to confirm before Phase 0 item 1 (Trustee decision record) is executed:

- **Item A.** Rename through to Corridors Communications under the CRC umbrella is applied at all layers — hub project record, Godley account keys (legacy COMMUNITY-MOBILE-* → CORRIDORS-COMMS-*), platform module paths (/services/mobile/ → /services/corridors/communications/), and all internal references.
- **Item B.** Phase 1 product scope is Mobile + NBN + Data + Voice under one PWN partner agreement, not Mobile-only. This remains unchanged from v1.0.
- **Item C.** The Foundation holds CSP status and accepts the attendant regulatory perimeter (TIO, ACMA, IPND, TCP Code, Part 13 privacy, metadata retention).
- **Item D.** Soft launch at Jubullum, Drake, and Tabulam includes at least 5 NBN premises at Jubullum specifically, to ensure the home-internet component is demonstrated in a First Nations regional context from day one.

24. Readiness statement

24.1 This document, together with the Foundation's established Community Electricity and Community LPG planning documents, the JVPA, the CJVM Hybrid Trust Declaration, the Sub-Trust C Deed, the Godley Accounting Specification v1.0, and the Foundation's current platform source at repo cogsaustralia/Cog, constitutes a complete specification for Phase 0 execution and PWN commercial engagement.

24.2 This document supersedes the earlier “Community Mobile” mobile-only scoping AND the v1.0 “Community Communications” draft. Where any earlier draft created database records, platform stubs, Godley account drafts, or other artefacts under earlier names, alignment to the CRC corridors_* / CORRIDORS-COMMS-* / Corridors Communications convention is applied as part of Phase 0

execution. Engineering identifiers under the corridors_* / CORRIDORS-* convention are permanent regardless of any future Songlines branding decision at umbrella level.

25. Amendment history

Version	Date	Change
1.0	25 April 2026	Initial issue. Renamed scope from Community Mobile (mobile-only) to Community Communications, with NBN, data and voice in Phase 1 from day one via the same PWN wholesale partnership. CSP regulatory perimeter accepted; eight-phase timeline.
1.1	25 April 2026	Aligned to COGS Resource Corridors (CRC) umbrella. Programme renamed Corridors Communications, placed in the Communications branch. New § 4A places the programme in the CRC umbrella structure. Engineering identifiers migrated COMMUNITY-COMMS-* → CORRIDORS-COMMS-*; module paths /services/communications/ → /services/corridors/communications/. Substantive content (Phase 1 product scope, regulatory posture, commercial model, platform build, accounting integration) unchanged.
