CORRIDORS TRANSPORT AND FREIGHT

Transport and Freight Service

Planning and Strategy Document

Version 1.1 · Issued 25 April 2026 · CRC umbrella aligned

Supersedes v1.0 (COGS Community Song Lines Draft) · Part of COGS Resource Corridors · Transport and Freight branch

A direct Member-benefit personal transport and freight programme, with dual-interface coordination for rideshare-style journeys and heavy-load freight, delivered through the COGS proprietary cryptographic resource management system.

Governing Law: South Australia, Australia

Drake Village, NSW 2469 · Wahlubal Country, Bundjalung Nation

PART 1 — PURPOSE AND SCOPE

1. Purpose

1.1 This document is the founding planning and strategy document for Corridors Transport and Freight, the Foundation's transport and freight programme. It covers two substantively different service categories that share a common platform, a common COG$ and Sub-Trust C overlay, and a common First Nations governance posture: personal transport and small-item delivery on the rideshare model, and larger freight requiring trailers, load-handling support, or specialised vehicles.

1.2 The programme operates on the COGS proprietary cryptographic resource management system — the same evidence-vault, identity, and Godley accounting infrastructure used across Community Electricity, Community LPG, and Community Communications. Transport-specific data (trip records, freight consignments, Member driver and operator identity, vehicle registrations, licences, insurance confirmations) is anchored to the evidence vault on the same cryptographic discipline as other Foundation activity.

1.3 A specific operational integration is built into the programme from day one: Corridors Transport and Freight is the delivery coordination layer for COGS Community LPG. Where Community LPG coordinates Member orders for aggregated Supagas delivery to community collection points, Corridors Transport and Freight coordinates last-mile movement of cylinders between collection points and Member premises where needed. The same operational pattern applies to any future Foundation-coordinated physical-goods movement.

1A. Branch placement and umbrella reference

1A.1 Corridors Transport and Freight sits in the Transport and Freight branch of COGS Resource Corridors. It is the sole programme currently committed to this branch. The three CRC branches (Communications, Energy, Transport and Freight) are established under the CRC Master Strategy and Governance Document v1.0.

1A.2 The CRC umbrella defines the common substrate on which every CRC programme operates: Member identity and KYC; COG$ tokens and the 15% services fee (adapted here to a fixed-per-transaction + percentage structure as described in Part 4); Sub-Trust C and the three-tier pattern (Community Basic, Community Standard, Community Supported); the Godley ledger; evidence-vault anchoring; FNAC governance; cross-hub governance; and Phase 0 discipline. Where this document previously would have restated those substrate elements, it now references the CRC Master Strategy. Substrate content is not duplicated here.

1A.3 This v1.1 document supersedes v1.0 (COGS Community Song Lines Planning and Strategy, Draft for FNAC Consultation) as a structural framing revision. The cultural-consent pathway for the Songlines name is now handled at the CRC umbrella level, not programme-by-programme; see CRC Master Strategy §2 and §29. The programme’s commercial model, regulatory posture (NSW BSP authorisation, HVNL Chain of Responsibility, Fair Work employee-like worker standards, rideshare GST), and Phase 0 checklist are substantively unchanged, though some Phase 0 items are re-worded to reflect the umbrella consent structure.

1A.4 Cross-branch integration: Corridors Freight is the delivery coordination layer for Corridors Energy: LPG (CRC Master Strategy §22), with Community Supported tier LPG Members receiving both the Supagas AUD cost and the last-mile Freight AUD cost funded from Sub-Trust C, producing end-to-end near-zero-cost supply of LPG to their premises. Corridors Communications delivers the

connectivity that Members use to access the Rides and Freight interfaces. Future cross-branch integrations (EV charging against Localvolts pricing; vehicle operating cost data flow; community generation to fleet EVs) are reserved and described in CRC Master Strategy §24.

2. Naming — Corridors now, Songlines preferred with consent

2.1 This programme is named Corridors Transport and Freight. It operates within the Transport and Freight branch of COGS Resource Corridors (CRC). The working name "Corridors" is applied consistently across all CRC branches and is the Foundation's operational-ready name today. This document uses "Corridors Transport and Freight" for the programme, "Corridors Rides" for the personal-transport sub-interface, and "Corridors Freight" for the heavy-load sub-interface.

2.2 The Foundation's preferred long-term name for this umbrella framework and for this programme is Songlines — the ancient Aboriginal system of knowledge pathways, cultural passports, trade routes, and custodianship that has connected Country across Australia for at least 65,000 years. The parallel to a community transport and freight programme is deliberate and, to the Foundation's eye, structurally beautiful. But Songlines are a living cultural and spiritual framework of First Nations peoples, subject to custodianship, kinship, and protocol that is not the Foundation's to claim. The Foundation will not adopt the Songlines name without the explicit, informed concurrence of the First Nations Advisory Council (FNAC), the Jubullum Local Aboriginal Land Council (JLALC), and Wahlubal Elders.

2.3 The consent pathway for the Songlines name is managed at the CRC umbrella level, not programme-by-programme. It is described in the CRC Master Strategy and Governance Document v1.0, §2 (Naming) and §29 (Naming conventions for new programmes). If and when concurrence is given, the Songlines name applies across the entire CRC framework at the public, Member-facing, and narrative layer; code and engineering identifiers remain `corridors_*` / `CORRIDORS-*` regardless. Until concurrence is given, the Corridors name is the programme's operational name in all contexts, including this document, public Member-facing interfaces, partner-facing communications, and regulatory submissions.

2.4 The programme's regulatory and commercial work (BSP authorisation, SMS development, partner engagement, Phase 0 items) proceeds under the Corridors name and is not gated on the Songlines concurrence. The concurrence is a Foundation-wide naming decision; the programme is a Foundation-wide operational commitment. The two run on parallel tracks and meet only at the point of public branding.

> **Cultural protocol baseline (applies regardless of final name)**
>
> Wherever the programme operates, drivers, operators, and Members are asked to observe the principle that Country is not empty space. The programme's onboarding, training, and route-planning materials incorporate acknowledgement of Country for the routes travelled, Elder-approved cultural-site awareness where applicable, and a simple protocol for respectful passage — the modern equivalent of the cultural passport. These provisions are developed with FNAC and JLALC guidance, not assumed.

3. Scope

3.1 Corridors Transport and Freight covers two service categories:

Service category	Scope
Corridors Rides	Personal transport and small-item collection/delivery. Vehicles with 12

Service category	Scope
	seats or less (including driver). Uber-style peer-to-peer coordination via the Corridors Rides app/interface. Direct Member-to-Member arrangements subject to platform safety and authorisation controls. Core service: point-to-point passenger transport. Extended service: small-item pickup and delivery within the same vehicle-class constraint (think Uber Eats / Uber Connect, not palletised freight).
Corridors Freight	Larger goods movement. Items over approximately 1 tonne; loads requiring trailer, ute tray, tipper, tanker, livestock crate, or similar; deliveries requiring load/unload support; specialised transport of water, hay, machinery, or bulk/fluid loads. Separate UX and UI reflecting the operational difference. Integrates with HVNL Chain of Responsibility for vehicles over 4.5 tonnes GVM.

3.2 Out of scope for Phase 1: scheduled bus services; school transport; medical transport where NDIS or Commonwealth Home Support Program funding applies; interstate heavy freight; dangerous goods other than LPG cylinders under the Community LPG integration; and livestock transport beyond short-distance community assistance movements. Each of these may be considered for a later phase subject to its own regulatory, insurance, and FNAC review.

3.3 Geographical phasing follows the established pattern: Phase 1 pilot at Jubullum, Drake, and Tabulam; Phase 2 NSW-wide; Phase 3 national where Member density and First Nations governance arrangements support extension.

4. Alignment with the Foundation's existing programmes

4.1 Corridors Transport and Freight uses the same three-tier structure (Community Basic, Community Standard, Community Supported) and the same COG$ services-fee mechanic established across Electricity, LPG, and Communications. The fee calculation is adapted for a variable per-transaction model rather than the periodic bill-based model used in the other programmes.

Element	Established pattern	Corridors Transport and Freight adaptation
Trigger for services fee	Monthly / periodic bill	Each completed trip or freight job
AUD leg	Cost pass-through to partner	Fixed-variable per-km cash fee paid to the driver/operator
COG$ leg	15% of AUD	Fixed COG$ fee per transaction PLUS a percentage of the AUD component
Supported tier	Sub-Trust C funds the AUD	Sub-Trust C funds the AUD fare; COG$ portion drawn or waived
Tier eligibility	First Nations, concession, PIF, state-care	Same
Regulatory partner	Localvolts / Supagas / PWN	The Foundation itself holds Booking Service Provider

Element	Established pattern	Corridors Transport and Freight adaptation
		authorisation; drivers and operators are Member-participants

4.2 The most material structural difference from the earlier programmes is that the Foundation is both the platform operator AND the Booking Service Provider under NSW point-to-point transport law. There is no external retail partner; the Foundation's role is equivalent to Uber's role in the Uber↔driver↔rider triangle — the platform that coordinates, authorises, and settles the transaction. This increases the regulatory perimeter materially relative to Community Electricity or Community LPG.

PART 2 — CULTURAL FRAMING AND FIRST NATIONS GOVERNANCE

5. Why this programme is First-Nations-governance-first

5.1 Transport and freight movement across Country is a matter that First Nations custodians have governed for at least 65,000 years. The modern highway network of Australia sits on top of ancient Songline routes. A programme that coordinates movement across that Country without FNAC and JLALC governance oversight would be missing the central point of what the programme is trying to be.

5.2 The Foundation is not presuming to "operate Songlines". The Foundation is proposing a modern community transport and freight service that explicitly acknowledges the underlying cultural reality of the routes it will traverse, seeks permission for the name and framing from the appropriate custodians, and builds First Nations governance into its structural DNA from Phase 0.

6. FNAC and JLALC governance touchpoints

6.1 Specific First Nations governance touchpoints for this programme, in addition to the standard cross-hub governance described in § 38:

- **Umbrella-level Songlines concurrence.** The CRC-wide consultation on use of the Songlines name (CRC Master Strategy §2) is an umbrella-level matter. This programme's Phase 0 item 1 records participation in that consultation; it does not gate programme delivery. The programme operates under the Corridors name.
- **Elder review of cultural-site awareness materials.** Driver and operator onboarding content, including route-specific acknowledgement of Country prompts, is reviewed by Wahlubal Elders before first use.
- **Cultural-heritage routing awareness.** Where a route would pass through or near a known cultural-heritage site, the platform surface a respectful acknowledgement or, for restricted sites, an advised alternative route. Site data remains under Elder and JLALC control; the Foundation does not hold or publish restricted-site information.
- **First Nations Member driver priority.** First Nations Members who wish to become Corridors Rides drivers or freight operators are given priority in onboarding, Class C COG$ earning incentives, and Foundation-side support (training, vehicle assistance through Sub-Trust C where appropriate).
- **Community-benefit reinvestment.** A portion of Foundation-side revenue from the programme cycles back to Sub-Trust C, within which the entrenched not-less-than-30% First Nations allocation under cl.27.3(d) applies.
- **FPIC for any new community.** Extension of the programme to a new Country or a new Traditional Owner community requires Free, Prior and Informed Consent from the relevant Traditional Custodians before Foundation-branded services operate in that area.

7. The cultural passport principle in modern form

7.1 In traditional Songline practice, a traveller passing through the Country of a neighbouring group did so by singing the portion of the song in the local language, acknowledging the custodians, and moving with respect. The modern equivalent in the Corridors Transport and Freight programme is a structural acknowledgement: drivers and Members see the Country they travel on in the app, see the relevant

Traditional Owner acknowledgement, and operate under a plain-English code of conduct that flows from this awareness.

7.2 This is not tokenistic and it is not expected to be burdensome. It is a two-line prompt at trip commencement ("You are about to travel across Wahlubal Country of the Bundjalung Nation. We acknowledge the Traditional Custodians.") and a simple expectation of respectful conduct. The cultural content is developed with FNAC and JLALC guidance; the Foundation does not author it in isolation.

8. Community Identified Cultural Information Protection (ICIP)

8.1 Indigenous Cultural and Intellectual Property protection is explicit in the Foundation's Declaration and applies to this programme. The Foundation does not hold, publish, or allow platform surfacing of restricted cultural information, including but not limited to location of secret-sacred sites, ceremonial detail, restricted kinship information, and any content that would breach the confidence of the traditional custodians.

8.2 Route data, trip histories, and consignment records are held on Foundation-controlled infrastructure under the existing data-protection regime. Aggregate or anonymised movement data is not shared with third parties, and the platform is explicitly NOT a surveillance or location-tracking system for the Member base. Member location data is collected only for the duration of an active trip or job and is minimised thereafter, with evidence-vault anchoring of the aggregate trip record (not granular GPS breadcrumbs) as the permanent audit record.

PART 3 — REGULATORY POSTURE

9. The regulatory perimeter is the largest of any programme to date

9.1 Corridors Transport and Freight sits in a heavier regulatory environment than Community Electricity, Community LPG, or Community Communications. The Foundation is the platform operator for passenger transport and freight services, which attracts multiple overlapping regimes:

Regime	Applies to	Foundation exposure
NSW point-to-point transport law (2016 Act / 2017 Regulation)	Corridors Rides — every vehicle 12 seats or less carrying paying passengers	Foundation is the Booking Service Provider (BSP). Mandatory authorisation, Safety Management System, Passenger Service Levy ($1.20/transaction).
Heavy Vehicle National Law (HVNL)	Corridors Freight — every vehicle over 4.5 tonnes GVM	Chain of Responsibility exposure as scheduler / consignor / consignee. Not the driver/operator, but a party in the chain.
Australian Consumer Law / ATO	Every transaction on the platform	Rideshare drivers must register for GST regardless of turnover (B v Commissioner of Taxation 2017). Platform facilitation obligations.
Fair Work Closing Loopholes Act (employee-like gig workers)	Driver and operator pay setting	Minimum-standards framework applicable to digital labour platforms; Fair Work Commission jurisdiction.
Privacy Act / APPs	All Member identity and location data	Existing Foundation privacy regime extended to trip and freight data. Cultural-heritage overlay applies for route information.
Road transport law generally	Driver licensing, vehicle registration, insurance	Verified at onboarding; not independently regulated by the Foundation but the Foundation holds the verification record.

10. NSW point-to-point — Booking Service Provider authorisation

10.1 Under the Point to Point Transport (Taxis and Hire Vehicles) Act 2016 (NSW), any business whose purpose is to take and manage bookings to transport passengers for a fare is a Booking Service Provider (BSP) and must be authorised by the Point to Point Transport Commissioner. The Foundation's Corridors Rides service falls squarely in scope. Penalties for operating without authorisation are up to $110,000 per offence, with higher penalties for repeat offences.

10.2 BSP authorisation is a 10-year authorisation subject to an initial application fee ($120, or $160 for combined Taxi Service Provider + BSP) and annual authorisation fees calculated on passenger-service-

transaction volume. The authorisation is held by the Foundation, not by individual driver Members. Drivers affiliated with an authorised BSP do not need individual BSP authorisation.

10.3 Mandatory BSP obligations:

- **Safety Management System (SMS).** The Foundation implements and maintains a documented SMS covering driver eligibility, vehicle eligibility, trip-based risk identification and management, driver fatigue, passenger safety (including Women's Safety Industry Guidelines), incident response, and continuous improvement. The SMS is subject to audit by the Commissioner's authorised officers.
- **Driver records.** The Foundation holds the full name, driver licence number, licence class, and driver authority records of every affiliated driver. Records are kept in NSW-accessible form.
- **Vehicle records.** The Foundation holds registration, insurance, and safety-inspection records for every vehicle operating under its BSP authorisation.
- **Fare transparency.** Every trip must provide the passenger with a fare estimate before the trip begins, along with driver and vehicle identification.
- **Passenger Service Levy.** $1.20 per passenger-service transaction, payable by the Foundation to Revenue NSW. Exemption pathway applies for Commonwealth Home Support Program Community Transport Service journeys (1 July 2025 to 30 June 2027). The Foundation will explore whether any Community Supported tier journeys may fall within this exemption; Phase 0 legal advice clarifies.
- **Notifiable occurrences.** Certain accidents, incidents, and occurrences must be reported to the Commissioner within specified timeframes.

What the Passenger Service Levy means at pilot scale

At pilot cohort scale of 30–60 Members with perhaps 10–20 active driver-Members, transaction volume is modest. If the Foundation carries out more than 150 but not more than 600 passenger service transactions in a twelve-month period, it may be eligible for a rebate. Below 150 transactions per year, the levy is still payable but administrative. The Community Transport exemption for Commonwealth Home Support Program journeys may apply to some Supported-tier trips — this is a Phase 0 clarification item.

11. Drivers as affiliated operators, not BSPs

11.1 The architecture is deliberate: driver Members do not hold individual BSP authorisations. They drive under the Foundation's BSP authorisation as affiliated drivers. This keeps the regulatory burden on the Foundation (which can resource it) and not on individual Member drivers (who could not reasonably each hold a BSP authorisation).

11.2 Driver Members are, however, required to hold a current NSW driver licence of the appropriate class, hold a Driver Authority issued by Transport for NSW if transporting passengers for hire or reward, carry appropriate vehicle insurance (including any commercial/CTP extension required for point-to-point work), and comply with the Foundation's SMS and code of conduct. Driver eligibility is checked at onboarding and re-checked annually.

12. GST and tax posture for drivers

12.1 The ATO's position (B v Commissioner of Taxation (2017) FCA 110) is that rideshare drivers must register for GST regardless of annual turnover. This overrides the general $75,000 threshold that applies to other small businesses. Every Corridors Rides driver must therefore:

- Hold an Australian Business Number (ABN).
- Be registered for GST.
- Issue tax invoices (or rely on the Foundation to issue RCTIs — Recipient Created Tax Invoices — on their behalf, which is the established platform pattern for Uber and similar operators).
- Account for GST on the gross fare received.
- Report income and deductions through their personal tax return.

12.2 The Foundation supports drivers through: (a) onboarding-time guidance on ABN and GST registration (with referral to a tax adviser, not Foundation-issued tax advice); (b) platform-issued RCTIs that make GST reporting straightforward; (c) an annual driver income statement summarising the calendar year's trips; and (d) a clear separation between the Foundation's own GST position and the driver's GST position.

12.3 The 15% COG$ services fee and the flow-through via Sub-Trust C as community infrastructure support is treated consistently with the established Foundation posture across Electricity, LPG, and Communications. Phase 0 tax advice confirms the specific application to transport transactions.

13. Fair Work Closing Loopholes Act — employee-like worker standards

13.1 The Fair Work Legislation Amendment (Closing Loopholes) Act now provides the Fair Work Commission with jurisdiction to set minimum standards for “employee-like” workers on digital labour platforms, including rideshare drivers. The Foundation's Corridors Rides driver model falls within this framework.

13.2 The Foundation's position is to not wait for Fair Work Commission orders to be made and imposed. Instead, from Phase 1 the Foundation voluntarily commits to:

- A per-kilometre fare floor indexed to cover vehicle operating cost plus a reasonable driver-time return, calibrated to local vehicle operating cost data.
- A minimum job acceptance guarantee (the driver sees the full trip details — pickup, destination, estimated fare — before accepting, and is not penalised for declining unsafe or uneconomic jobs).
- Transparent fee splits (AUD fare, Foundation services fee, Passenger Service Levy, GST — all itemised).
- No deactivation without a documented reason and an internal review process.
- Safety-first posture: no gamification or surge-pressure tactics that incentivise fatigue or risk-taking.

13.3 This posture also differentiates the programme commercially: a driver deciding whether to drive for Uber, DiDi, Ola, or Corridors Transport and Freight has a reasonable basis for preferring Corridors Transport and Freight on the grounds of fair fare, honest trip information, and community orientation.

14. Heavy Vehicle National Law and Chain of Responsibility

14.1 Corridors Freight involves vehicles that may be over 4.5 tonnes GVM. Where this is the case, the Heavy Vehicle National Law (HVNL) applies and the Foundation is exposed as a “party in the Chain of Responsibility” by virtue of its functions. The Foundation is likely to be: a scheduler (matching loads to operators); a consignor-adjacent party (where the Foundation itself is sending goods, such as coordinated LPG deliveries); a consignee-adjacent party (where Foundation-coordinated goods arrive at a Member premises); and operator of the platform influencing safety behaviour.

14.2 Chain of Responsibility primary duty means the Foundation must ensure, so far as is reasonably practicable, the safety of its transport activities. Practical compliance includes:

- Operator-Member onboarding that verifies heavy-vehicle licence class, fatigue-management compliance history, and insurance.
- Scheduling discipline that does not pressure operators to breach work-and-rest rules.
- Load documentation (packing, weight, dimensions, restraint).
- Incident reporting to the NHVR as required.
- Executive-level due diligence by the Caretaker Trustee (or Board at Expansion Day) covering HVNL primary-duty posture.

14.3 The Foundation does not own heavy vehicles. Operators are Member-participants who bring their own vehicles. This does not reduce Chain of Responsibility exposure — it simply means the Foundation's duties are scheduler-and-platform duties, not owner-operator duties.

15. Insurance

15.1 Insurance is critical and the perimeter is larger than any other Foundation programme. Phase 0 insurance review covers:

- **Foundation platform professional indemnity and cyber liability.** Covers the Foundation's role as platform operator and BSP.
- **Public liability cover.** Foundation's existing public liability extended to cover BSP operational exposure.
- **Directors' and Officers' liability.** Covering Caretaker Trustee (and, post-Expansion, Board) exposure under HVNL executive due diligence and BSP primary duty.
- **Driver insurance verification.** Drivers must hold comprehensive vehicle insurance with a rideshare/commercial extension acceptable to the Foundation. Verified at onboarding and re-verified annually. The Foundation does not provide driver vehicle insurance, but verifies it.
- **Freight operator insurance verification.** Freight operators must hold appropriate commercial vehicle and public liability cover. Verified at onboarding.
- **Passenger and cargo contingent liability.** Foundation-held cover for scenarios where driver/operator cover is inadequate or void.

16. What the Foundation does not do

16.1 Explicit exclusions that limit Foundation liability and scope:

- The Foundation is not a taxi service provider. It does not coordinate rank-and-hail services.
- The Foundation is not a heavy-vehicle operator. It does not own or operate heavy vehicles.
- The Foundation is not a freight forwarder. It does not take bailment of goods, hold an Australian Transport Standards accreditation, or issue bills of lading.
- The Foundation is not a priority-assistance medical transport provider. Members with medical priority needs are referred to existing services.
- The Foundation does not provide dangerous-goods transport beyond LPG cylinders under the established Community LPG partnership with Supagas. Dangerous goods otherwise remain out of scope.

PART 4 — COMMERCIAL MODEL

17. Plain-language description

17.1 Members fall into two roles: Rider/Consignor Members (who book trips or freight jobs) and Driver/Operator Members (who provide the service). A Member may be both, at different times, for different jobs. Every transaction is coordinated through the Foundation platform, cleared through the Foundation's Godley ledger, anchored to the evidence vault, and subject to the Foundation's three-tier Sub-Trust C overlay.

17.2 The AUD leg is calculated as a fixed-variable per-kilometre fee. “Fixed-variable” means the unit rate is fixed per kilometre but the total is variable with distance. The per-kilometre rate covers driver/operator vehicle operating cost (fuel, tyres, maintenance allocation, depreciation) plus a reasonable driver-time component. The rate is set by the Foundation Board, subject to the Fair Work minimum-standards framework, and reviewed at least annually.

17.3 The COG$ leg is calculated differently from other Foundation programmes: a fixed COG$ platform fee per transaction PLUS a percentage of the AUD component. The fixed fee covers the platform booking, dispatch, evidence-anchoring, and administrative cost; the percentage captures value proportional to trip or job size.

18. Fare structure — Corridors Rides

18.1 Rides fare structure has four elements:

Element	Illustrative value	Purpose
Base fare (booking)	$3.00 AUD + $1.20 PSL	Covers booking and Passenger Service Levy
Per-km rate	$1.20–$2.00 AUD/km	Driver operating cost + time component; Board-approved and reviewed annually
Per-minute (time) rate	$0.40–$0.60 AUD/min	Traffic and wait; Board-approved
COG$ services fee	Fixed 2 COG$ per trip + 10% of AUD fare	Foundation platform; flow-through to Sub-Trust C

18.2 Indicative numbers only. Actual numbers are set by Board decision in Phase 3 based on local vehicle operating cost data and the Fair Work minimum-standards framework. The structure is: driver keeps the AUD fare (minus GST); Foundation collects the COG$ services fee; Passenger Service Levy flows to Revenue NSW.

18.3 No surge pricing. The AUD rate is stable and transparent. Where demand exceeds supply in a community, the platform responds by posting a higher-priority notification to nearby available drivers, not by inflating the fare to the rider.

19. Fare structure — Corridors Freight

19.1 Freight fare structure differs materially from Rides because the vehicle, load, and handling requirements vary widely. The structure is quote-based with a schedule of fixed rates for standard jobs:

- **Per-job base fare** (covers booking, insurance overhead, administrative cost): e.g. $15–$40 depending on vehicle class.
- **Per-km rate** depending on vehicle class: ute/trailer rate, small truck rate, heavy-truck rate, specialised-truck rate.
- **Load/unload labour component** where applicable, priced per half-hour.
- **Specialised surcharge** for water delivery, hay bale count, machinery movement, etc.
- **COG$ services fee** calculated as fixed 5 COG$ per job + 10% of AUD charge.

19.2 For non-standard jobs, the interface supports operator quotes: the consignor posts the job, specifies requirements, and receives quotes from available operators. The consignor selects on price, operator rating, and availability. Foundation services fee is calculated on the accepted AUD quote value.

20. Tier structure

Tier	Member experience as Rider/Consignor	Funding and constraints
Community Basic	Pay AUD fare/charge in full to driver/operator; pay COG$ services fee to Foundation.	Modest Class C COG$ offset against services fee, subject to caps.
Community Standard	Pay AUD fare/charge in full; pay COG$ services fee; priority dispatch on community rides (e.g. community-run transport days).	Larger Class C offset available, subject to caps.
Community Supported	Sub-Trust C funds AUD fare/charge up to a per-Member monthly cap; COG$ services fee drawn from Class C or waived. Priority for essential journeys (medical appointments, groceries, cultural obligations).	Eligible: First Nations Members; concession; Pay It Forward; state-care. Monthly cap set by Board.

21. Driver / Operator earning model

21.1 Drivers and operators receive the AUD fare paid by the rider or consignor. The Foundation does not deduct a percentage commission from the driver's AUD earnings. This is a material difference from Uber (27.5% commission) and other commercial rideshare platforms.

21.2 The Foundation's revenue comes entirely from the COG$ services fee, which is paid by the rider/consignor separately from the driver's AUD earnings. Economically, the driver's AUD fare is not reduced by Foundation participation; the rider's total cost is the AUD fare to the driver plus the COG$ fee to the Foundation.

21.3 Class C COG$ earning for drivers and operators is additional to the AUD fare. Every completed job earns the driver a Class C COG$ credit. The Board sets the earning mechanism in Phase 3 (for example, 1 Class C COG$ per $10 AUD of completed jobs). First Nations driver/operator Members may be allocated a higher earning rate, subject to FNAC endorsement, consistent with the entrenched 30% First Nations allocation. This earning mechanism is the primary incentive for Members to become drivers or operators.

22. Worked example — Rides

22.1 Illustrative 12km urban trip at $1.50/km + $0.50/min for an 18-minute trip:

Flow	Basic	Standard	Supported
AUD base + km + time	$21.00 + $3.00 base + $1.20 PSL = $25.20	$25.20	$25.20
Rider pays (AUD)	$25.20	$25.20	$0 (up to cap)
Sub-Trust C pays	$0	$0	$25.20
COG$ services fee	2 + 10% × $24 = 4.40 COG$	4.40 COG$	4.40 COG$
Rider pays services fee (COG$)	4.40	4.40	0 (drawn/waived)
Driver receives (AUD, pre-GST)	$24.00	$24.00	$24.00
Driver Class C COG$ earned	2.40 COG$	2.40 COG$	2.40 COG$

22.2 Illustrative only. Board sets actuals in Phase 3 after reviewing vehicle operating cost data, competitor fare benchmarks, and Fair Work minimum-standards guidance.

23. Worked example — Freight

23.1 Illustrative hay delivery job: 30 round bales, 80km round trip, small truck + trailer, 45 minutes loading, 20 minutes unloading:

Element	Value
Per-job base	$35.00
Per-km (80km × $2.80 small truck)	$224.00
Loading/unloading (65 min × $0.80)	$52.00
Hay surcharge (30 bales × $1.50)	$45.00
Subtotal AUD	$356.00
GST (operator's own GST obligation)	included per operator
COG$ services fee (5 + 10% × $356)	40.60 COG$
Operator receives (AUD, pre-GST)	$356.00

Element	Value
Operator Class C COG$ earned	35.60 COG$

23.2 For non-standard jobs the operator quotes; the flow is the same.

PART 5 — UX AND UI DESIGN

24. Two interfaces, one platform

24.1 Corridors Rides and Corridors Freight share the same authentication, evidence-vault, Godley ledger, and Member identity substrate, but present as two distinct interfaces. The reason is operational reality: booking a lift to the shops is a two-tap transaction; coordinating a truck for hay bales with load-handling assistance is a five-step conversation. One interface cannot serve both without confusing both.

24.2 Research on successful dual-interface platforms (Uber's separation of Uber and Uber Freight apps; Airtasker's posted-task-and-quote flow for variable-scope services; Borrow-Yes-style asset-sharing for specialised equipment) informs the split. The pattern: fast, simple, map-first flow for high-frequency small transactions; post-and-quote, specification-rich flow for lower-frequency larger transactions.

25. Corridors Rides UX — fast, simple, map-first

25.1 Target: three taps from intent to booking confirmed. Primary view is a map showing the Member's current location and available nearby drivers. The UX hierarchy:

- **Tap 1 — Where to?** Destination entry (text or pin drop). Recent destinations and favourites surface immediately.
- **Tap 2 — Confirm.** Fare estimate, driver ETA, vehicle type, Country acknowledgement for the route, tier-specific information (e.g. “this trip is within your Supported-tier monthly cap”).
- **Tap 3 — Book.** Foundation dispatches to nearest/best-matched driver. Driver accepts; rider sees driver identity, vehicle, ETA.

25.2 Progressive disclosure: advanced options (preferred driver, share trip with another Member, schedule for later, accessibility requirements, small item pickup) are one tap away but not in the primary flow.

25.3 During-trip view: route map, driver contact, emergency button (direct dial 000), trip share with a trusted contact, cancel option. Post-trip view: fare breakdown, COG$ fee breakdown, tier/subsidy record, driver rating, feedback.

26. Corridors Freight UX — post and quote

26.1 Target: comprehensive enough to communicate the job accurately to the operator on first post, flexible enough to accept operator questions and quote adjustments. Primary view is a job-card composition surface:

- **Job type.** Standard categories (hay, water, machinery, general freight, LPG cylinders) plus “other / custom”.
- **Pickup and delivery locations.** Addresses or map pin-drops, with optional photos of pickup and delivery points.
- **Vehicle class required.** Ute, ute+trailer, small truck, medium truck, heavy truck, tipper, water cartage tanker, livestock crate, machinery float, specialised (free-text).
- **Load specification.** Weight estimate, dimensions, count (bales, cylinders, pallets), photos recommended.
- **Handling requirements.** Load/unload assistance needed (self, two-person, forklift, HIAB crane, manual bale handling).

- **Scheduling.** Desired date and window; flexibility indicator.
- **Access constraints.** Gate access, low-clearance, soft ground, livestock in paddock, any Country-access protocol (consultation with Elders where a route crosses cultural-heritage-sensitive land).

26.2 Once posted, qualified operators within the service area receive the job in their operator interface. They can accept at the standard rate card, quote a price, ask a clarifying question, or decline. The consignor receives quotes (typically within 1–6 hours for standard jobs; longer for specialised work) and selects.

27. Operator side (both Rides and Freight)

27.1 Driver Members and operator Members see a parallel interface:

- **Available jobs feed** (nearby rides for drivers; posted freight jobs matching the operator's vehicle class for operators).
- **Pre-acceptance transparency:** full trip details including destination, estimated fare, special requirements. The operator sees the full job before accepting. No hidden-destination mechanics.
- **Acceptance, navigation, execution, completion.** Standard workflow with evidence-vault anchoring at each transition.
- **Earnings ledger.** Live view of completed jobs, AUD earnings, Class C COG$ earned, scheduled RCTI delivery.
- **Compliance dashboard.** Hours worked, fatigue-management warnings (especially for HVNL-class vehicles), licence and insurance expiry reminders, SMS compliance training cadence.

28. Cultural overlay in the interface

28.1 Both Rides and Freight interfaces surface a lightweight cultural-acknowledgement layer:

- **Country acknowledgement at trip start:** "You are about to travel across [Country] of the [Nation]." One-line, respectful, non-intrusive.
- **Cultural-site awareness:** Where a route passes near a significant site (non-restricted, publicly acknowledged), a brief note with Elder-approved language. Restricted sites are not surfaced; the routing simply routes around them when required by FNAC guidance.
- **Traditional place names:** Where First Nations language names exist alongside settler place names, both are shown.
- **FNAC-curated content** is held under Elder custodianship and surfaced through the Foundation platform under permission. The Foundation does not generate or curate First Nations cultural content itself.

PART 6 — PLATFORM BUILD

29. Module structure

29.1 Two top-level Member-facing directories and a parallel admin structure, consistent with the established Foundation platform pattern (PHP 8.4 / MariaDB 10.6 / Apache / cPanel Serversaurus):

Path	Purpose
/services/corridors/transport/rides/	Rides Member module. Booking, active trip, trip history, rating, tier view.
/services/corridors/transport/freight/	Freight Member module. Job posting, quotes received, active jobs, job history, operator selection.
/services/corridors/transport/operator/	Operator Member module (used by drivers for Rides and operators for Freight; one interface with role toggle).
/admin/corridors/transport/	Back-office. Authorisation and compliance dashboard, SMS management, driver/operator onboarding, dispute resolution, subsidy processing, services-fee run, BSP reporting, HVNL Chain of Responsibility log.

30. Database schema additions

30.1 Schema additions, prefixed corridors_transport_:

Table	Purpose
corridors_transport_driver_operators	One row per active driver or operator Member. Columns: member_id, role ENUM('driver','operator','both'), licence_number, licence_class, licence_expiry, driver_authority_ref, insurance_ref, insurance_expiry, sms_training_completed_at, onboarded_at, suspended_at, suspension_reason.
corridors_transport_vehicles	One row per active vehicle. Columns: operator_id, registration, state, vehicle_class ENUM('car','ute','trailer','small_truck','medium_truck','heavy_truck','tipper','tanker','livestock','machinery_float','other'), gvm_kg, capacity, rego_expiry, inspection_expiry, insurance_expiry, specialised_notes.
corridors_transport_trips	Rides trips. Columns: rider_id, driver_id, vehicle_id, pickup_lat, pickup_lng, dest_lat, dest_lng, distance_km DECIMAL(8,3), duration_min, base_aud_cents, km_aud_cents, time_aud_cents, psl_aud_cents, total_aud_cents, services_fee_cogs_cents, subsidy_aud_cents, started_at, completed_at, status, cultural_ack_shown.
corridors_transport_freight_jobs	Freight jobs. Columns: consignor_id, job_type, pickup_lat, pickup_lng, dest_lat, dest_lng, distance_km,

Table	Purpose
	vehicle_class_required, load_description, load_weight_kg_est, handling_requirements, schedule_window_start, schedule_window_end, status ENUM('posted','quoting','accepted','in_transit','delivered','cancelled','disputed'), accepted_operator_id, agreed_aud_cents, services_fee_cogs_cents, subsidy_aud_cents, posted_at, completed_at.
corridors_transport_freight_quotes	Quotes from operators on posted jobs. Columns: job_id, operator_id, quote_aud_cents, quote_notes, submitted_at, status.
corridors_transport_rcti	Recipient Created Tax Invoices issued by the Foundation on behalf of driver/operator Members. Columns: driver_operator_id, period_start, period_end, gross_aud_cents, gst_aud_cents, issued_at.
corridors_transport_incidents	Safety incidents, notifiable occurrences, driver fatigue warnings, HVNL CoR events. Columns: type, severity, member_id, trip_id or job_id, description, reported_to_commissioner_at, reported_to_nhvr_at.
corridors_transport_subsidies	Sub-Trust C AUD payments for Supported-tier journeys and jobs. Columns: member_id, trip_id or job_id, aud_cents, stc_transfer_ref, transferred_at.
corridors_transport_services_fees	Foundation 15% COG$ invoices for Rides and Freight. Columns: payer_member_id, trip_id or job_id, fee_cogs_cents, issued_at, settled_at.
corridors_transport_driver_earnings	Class C COG$ earned by drivers and operators. Columns: driver_operator_id, trip_id or job_id, class_c_cogs_cents, accrued_at.

31. Godley accounting integration

Account key	Purpose
CORRIDORS-TRANSPORT-AR	AR — COG$ services fees invoiced.
CORRIDORS-TRANSPORT-REV	Revenue — COG$ services fees settled.
CORRIDORS-TRANSPORT-PSL	Passenger Service Levy payable to Revenue NSW.
CORRIDORS-TRANSPORT-SUBSIDY	Expense — Sub-Trust C AUD paid to drivers/operators for Supported-tier journeys and jobs.
CORRIDORS-TRANSPORT-DRIVER-EARNINGS-CLEARING	Clearing — AUD collected from riders/consignors in-platform (where platform handles payment) and paid to driver/operator. Net-zero under pass-through.
CORRIDORS-TRANSPORT-	Class C COG$ earned by drivers/operators as Foundation-

Account key	Purpose
CLASS-C-EARNED	side burn.
CORRIDORS-TRANSPORT-OFFSET-CLEARING	Clearing — Class C offsets applied by riders/consignors against services fees.

31.1 The Class C earning mechanism introduces a small but important flow: Foundation-side, each completed trip or job generates a Class C COG$ credit for the driver/operator. This is a new burn type within the existing Sub-Trust C framework and is recorded in the ledger accordingly. Phase 4 produces the detailed double-entry flows; the summary is that Class C earned by drivers represents the Foundation's investment in Member economic participation and is reported against the entrenched 30% First Nations allocation where the recipient is a First Nations Member.

32. Payment processing

32.1 Payment for the AUD leg is a design choice with two viable paths:

Path	Description and trade-offs
Platform-brokered payment (Uber pattern)	Rider/consignor pays the Foundation platform; the Foundation remits the driver/operator AUD amount net of Foundation-held obligations (PSL, Foundation services fee). Simpler rider experience; heavier platform regulatory exposure including potential treatment as AUSTRAC-reporting non-cash payment facility and ATO Taxable Payments Annual Report obligations.
Direct rider-to-driver payment (classic taxi pattern)	Rider pays driver directly (card-on-file, EFTPOS in vehicle, or similar); Foundation issues the COG$ services fee invoice separately. Simpler platform regulatory exposure; requires drivers to have payment-acceptance capability and complicates Supported-tier funding (Sub-Trust C would need to reimburse the driver via Foundation-brokered flow).

32.2 Phase 0 legal and regulatory review determines the preferred path. The platform is built to support either, with the choice finalised before Phase 5 build. The default design assumption is platform-brokered payment using Stripe Connect or equivalent, with the driver as the direct beneficiary account and the Foundation holding only its own services fee and PSL portion in its own account — which keeps the Foundation out of payment-facility classification while enabling Supported-tier settlement through a single clean flow.

PART 7 — COMMUNITY LPG INTEGRATION

33. Operational fit

33.1 COGS Community LPG establishes an aggregated-order model where Supagas delivers to community collection points (Drake Village Resource Centre, Tabulam community centre, JLALC-designated points at Jubullum) on scheduled delivery days. That model leaves a gap: Members who cannot get to the collection point on the delivery day. Corridors Transport and Freight closes that gap.

33.2 Operationally, the flow is:

- Supagas delivers cylinders to the community collection point under the Foundation's LPG wholesale account.
- Members who have ordered through the LPG platform indicate whether they will self-collect or require Corridors Transport and Freight delivery.
- Corridors Freight posts a low-complexity delivery job — collection-point to Member premises, ute or van class, cylinder count and weight, safety handling protocol.
- Available Corridors Freight operators (typically local Member drivers in Drake, Tabulam, or Jubullum) accept and complete the delivery.
- The LPG consignment record closes only when the Corridors Transport and Freight delivery is marked complete and the Member confirms receipt. Evidence-vault anchoring connects the LPG order, the Supagas bulk delivery, and the Corridors Transport and Freight last-mile delivery into a single consignment chain.

34. Dangerous-goods handling

34.1 LPG cylinders are classified as dangerous goods (UN 1075, Class 2.1 flammable gas). Handling and transport are regulated under the Australian Code for the Transport of Dangerous Goods by Road and Rail (ADG Code) administered by the NHVR for heavy vehicles and by state regulators for lighter vehicles.

34.2 For 45kg home cylinders and smaller, transport in a Corridors Freight operator vehicle is generally covered by placarded-load exemption provisions where total load is under the threshold. However, specific handling protocols apply:

- Upright orientation during transit.
- Secured against movement.
- Ventilated vehicle space (not sealed enclosure).
- Valve closed and capped.
- No transport in passenger space of a car (must be ute tray, van cargo, or trailer).
- No smoking in vehicle during transport.
- Short-route delivery only; no multi-day transport.

34.3 Operators delivering LPG are specifically certified under the Foundation's SMS with training from Supagas or an equivalent dangerous-goods-trained source. LPG delivery is a restricted job category — only operators with the LPG-certified flag can accept LPG jobs. Foundation verifies certification at onboarding.

35. LPG delivery pricing

35.1 LPG delivery under the Corridors Transport and Freight LPG integration is priced as a Corridors Freight job using the ute or small-truck rate, with a fixed LPG-handling surcharge per cylinder. The LPG Member's tier determines how the AUD cost of the delivery is funded (Supported tier pays from Sub-Trust C). The COG$ services fee applies normally.

35.2 For Community Supported tier LPG Members, the integrated model produces a high-value outcome: Sub-Trust C funds both the Supagas cylinder cost AND the Corridors Transport and Freight delivery cost, delivering the cylinder to the Member's premises at zero or near-zero net AUD. This is the entrenched 30% First Nations allocation under cl.27.3(d) operating as a concrete service to First Nations Members in regional communities.

36. Extensibility to other goods

36.1 The LPG integration pattern is a template. The Foundation's other programmes that involve physical goods movement — future expansions like community-bulk food or water deliveries, shared agricultural input orders, aggregated hardware supplies — can use the same Corridors Freight last-mile layer. The platform does not need to be adapted per programme; each programme posts jobs and the Corridors Freight operator fleet fulfils them.

PART 8 — PHASE 0 AND TIMELINE

37. Phase 0 checklist

37.1 Phase 0 for Corridors Transport and Freight is the heaviest of any Foundation programme to date because of the regulatory perimeter and the cultural concurrence requirement. The checklist has 14 items, all of which must close before Phase 1 begins.

#	Item	Success condition
1	Participation in CRC umbrella-level cultural consultation (FNAC, JLALC, Wahlubal Elder) on use of the Songlines name across the CRC framework. Note: this concurrence is sought at the umbrella level, not programme-by-programme; the programme proceeds under the Corridors name regardless of consultation outcome.	Umbrella consultation active; programme Phase 0 not gated on outcome
2	Wahlubal Elder consultation on cultural-site awareness materials and protocols	Elder-approved content on file; restrictions documented
3	Trustee decision record authorising programme scope	Signed TDR filed
4	Legal review: BSP authorisation scope; HVNL Chain of Responsibility; Foundation platform classification; Fair Work employee-like worker posture	Written legal opinion on file
5	GST and tax advice: RCTI process for driver/operator Members; Foundation's own GST position; Sub-Trust C flow-through treatment of services fees	Written advice on file
6	AML/CTF review: payment-facility implications if platform-brokered payment used; existing Member KYC perimeter coverage	Written confirmation or recommended adjustments on file
7	Insurance review: platform PI; BSP public liability; D&O; contingent passenger and cargo liability; driver and operator insurance verification standards	Cover confirmed or endorsement completed; driver/operator minimum insurance standards documented
8	NSW BSP authorisation application	Authorisation granted by Point to Point Transport

#	Item	Success condition
	lodged and accepted	Commissioner
9	Safety Management System (SMS) developed, documented, and ready for audit	SMS on file; covers passenger and freight operations
10	Passenger Service Levy taxpayer registration with Revenue NSW	Registered within 7 days of first becoming liable
11	Dangerous-goods handling certification and training pathway for LPG-certified operators established (in partnership with Supagas)	Training pathway documented; first cohort of LPG-certified operators identified
12	Driver and operator onboarding process developed: licence check, driver authority verification, vehicle inspection, insurance verification, SMS training, cultural-awareness briefing	Process documented and tested
13	Community information briefings at Drake, Tabulam, Jubullum, specifically covering both Rides and Freight aspects of the programme	Attendance recorded; questions logged; Jubullum briefing endorsed by JLALC
14	Phase 0 closure decision record	Signed TDR authorising Phase 1 commencement

37.2 Item 2 (Wahlubal Elder consultation on cultural-site awareness materials and protocols at the programme level) is distinct from Item 1 (umbrella-level Songlines naming concurrence) and is operationally important — the programme's driver onboarding and route-planning materials require Elder-approved content before first use. Item 2 is a programme-level gate. Item 1 is an umbrella-level consultation that runs on its own timeline.

37.3 Item 8 (BSP authorisation) is on the critical path. The Point to Point Transport Commissioner typically processes authorisation applications within weeks but can take longer if information is incomplete. Application quality matters; the Foundation's SMS (item 9) must be materially complete before the BSP application is lodged.

38. Timeline

38.1 Corridors Transport and Freight is a longer programme than Electricity or LPG because of the BSP authorisation process, the SMS build, and the cultural concurrence sequence. Indicative timeline:

Phase	Window	Content
Phase 0 — Readiness	May–Sep 2026	Full checklist above. Item 2 (Elder consultation on programme-level cultural content) early; items 3–7 (legal, tax, AML, insurance) in parallel; items 8–10 (BSP authorisation, SMS, PSL registration) sequenced. Item 1 (umbrella Songlines consultation)

Phase	Window	Content
		runs on umbrella timeline.
Phase 1 — Product design and rate setting	Sep–Oct 2026	Board-approved per-km rates, services-fee structure, Class C earning rates, tier caps. Fair Work minimum-standards posture finalised.
Phase 2 — Platform build (Rides)	Oct–Dec 2026	/services/corridors/transport/rides/ and /services/corridors/transport/operator/ modules. Core trip flow, evidence-vault anchoring, Godley integration, payment processing. Stripe Connect or equivalent.
Phase 3 — Driver onboarding	Nov–Dec 2026	First cohort of 8–15 driver Members across Drake, Tabulam, Jubullum. Licence, authority, insurance, vehicle, SMS training, cultural-awareness briefing. First Nations driver priority.
Phase 4 — Rides soft launch	Jan 2027	Rides live with pilot cohort. Closed-cohort first month — only Foundation Members can ride — then expanded to community. Monitoring and SMS refinement.
Phase 5 — Platform build (Freight)	Feb–Mar 2027	/services/corridors/transport/freight/ module. Job posting, quoting, operator matching, HVNL Chain of Responsibility compliance layer.
Phase 6 — Freight and LPG integration launch	Apr 2027	Freight live. LPG last-mile integration live. First Sub-Trust-C-funded end-to-end LPG delivery to a Jubullum Supported-tier Member.
Phase 7 — NSW general availability	H2 2027	Rides and Freight open to all NSW Members. Cohort scale moves from tens to hundreds. Monthly published reporting.
Phase 8 — National extension	2028+	Extension to other states via additional state BSP authorisations as required. FPIC for each new First Nations Country.

39. What has to wait

39.1 The following are explicitly not Phase 1 content and are on a later-phase roadmap:

- Interstate operations (each state's point-to-point regulator has its own authorisation regime).
- NDIS-funded or medical priority transport.
- Dangerous goods beyond LPG cylinders under the established Supagas integration.
- Livestock transport beyond short-distance community assistance movements.
- Autonomous or connected-vehicle integration.
- Integration with a future COGS community generation programme's haulage needs (which is itself a later-phase concept).

- Any Country-hosted service in a community where FPIC has not been given.

PART 9 — RISK REGISTER AND CROSS-HUB GOVERNANCE

40. Risk register

Risk	Description	Lik.	Imp.	Mitigation
Songlines concurrence declined at umbrella level	FNAC / JLALC / Elder consultation declines use of the Songlines name at the CRC umbrella. The programme continues under the Corridors name; no programme-level consequences beyond rebranding reversal becoming unavailable.	L–M	L (for programme; material for umbrella narrative only)	Programme operates under Corridors name from the outset; the umbrella consent pathway is structurally separated from programme delivery. No programme-level disruption on decline.
BSP authorisation refused or delayed	Point to Point Transport Commissioner refuses or delays authorisation.	L	H	Thorough SMS preparation before application; pre-application conversation with the Commissioner's industry contact; responsive to any requests for information.
Driver injury or assault	Foundation-affiliated driver is injured or assaulted during a Foundation-coordinated trip.	L	H	SMS includes Women's Safety Industry Guidelines; in-app emergency button; trip sharing with trusted contact; ride-end confirmation; drivers not required to accept trips they consider unsafe.
Passenger injury or assault	Foundation-affiliated driver causes passenger harm.	L	H	Stringent driver onboarding

Risk	Description	Lik.	Imp.	Mitigation
				including Driver Authority verification (which includes criminal history checks); ride recording permitted at passenger discretion; rapid deactivation pathway on any credible allegation.
Cargo loss or damage	Freight consignment lost, damaged, or delivered to wrong recipient.	M	M	Consignment record with photographic evidence at pickup and delivery; operator insurance verification; Foundation contingent cover; dispute-resolution process.
HVNL Chain of Responsibility breach	Foundation's scheduling or dispatch practices contribute to operator fatigue or overloaded vehicle.	L	H	Fatigue-management compliance layer in platform; load documentation at job acceptance; primary-duty training for Foundation staff and executive; executive due-diligence discipline.
LPG dangerous-goods incident	Operator handling LPG cylinder causes ignition, leak, or explosion.	L	H	Only LPG-certified operators can accept LPG jobs; mandatory handling protocol checklist at job acceptance; restricted vehicle classes; short-route delivery

Risk	Description	Lik.	Imp.	Mitigation
				only.
Passenger Service Levy non-compliance	Failure to remit PSL correctly to Revenue NSW.	L	M	Automated PSL accrual in platform; monthly Revenue NSW reconciliation; Community Transport exemption applied where properly documented.
Driver GST non-compliance	Driver fails to register for GST or fails to meet GST obligations.	M	M	Foundation onboarding includes GST-registration verification; RCTI flow simplifies driver GST reporting; annual driver income statement.
Fair Work Commission minimum-standards order	An FWC order imposes minimum standards the Foundation is not meeting.	M	M	Voluntary commitment to fair-fare floor, transparent fee splits, and pre-acceptance trip transparency materially reduces exposure. Ongoing monitoring.
Cultural-site breach	Operator or driver knowingly or unknowingly enters a restricted cultural-heritage site.	L	H	Platform routing respects Elder guidance; driver/operator cultural-awareness briefing; FNAC-curated information; clear escalation for any breach.
Platform failure in a live trip	Platform outage during a live trip or high-value freight job.	L	M	In-app direct driver contact persists during outage; offline-

Risk	Description	Lik.	Imp.	Mitigation
				reconciliation protocol; documented outage procedure.
Payment processing dispute	Chargeback or dispute on platform-brokered payment.	M	L	Stripe Connect dispute-handling; Foundation retains only its own services fee and PSL; driver/operator bears the majority of dispute risk on their own fare (same as any rideshare).
Member economic exclusion	Class C earning rates too low for drivers/operators to find the programme worthwhile.	M	M	Phase 3 rate setting reviewed against competitor commission rates (Uber 27.5%) and driver satisfaction surveys; Board has power to adjust quarterly.
Country-hosted service without FPIC	Foundation or a Member driver offers service on a Country where FPIC has not been obtained.	L	H	FPIC is a gating requirement for geographic extension; platform does not surface jobs or trip requests in non-FPIC areas; operator training emphasises the requirement.

41. Cross-hub governance

Hub	Touchpoint
First Nations	FNAC endorsement; JLALC concurrence for name and Jubullum operation; Wahlubal Elder consultation for cultural content; First Nations driver priority; 30% allocation monitoring; FPIC for geographic extension.

Hub	Touchpoint
Financial Oversight	PSL reconciliation with Revenue NSW; Sub-Trust C draw for Supported-tier journeys and jobs; COG$ services-fee run; driver RCTI reconciliation; Class C COG$ earning accrual and reporting.
Day-to-Day Operations	BSP authorisation maintenance; SMS operation and audit readiness; TIO-equivalent complaints handling (direct-to-Foundation, not industry TIO); NHVR HVNL compliance; driver and operator onboarding pipeline; incident response; Point to Point Transport Commissioner reporting.
Technology and Blockchain	/services/corridors/transport/ and /admin/corridors/transport/ modules; evidence-vault anchoring for every trip, job, consignment, subsidy, and services-fee event; integration with Community LPG for last-mile coordination; Hyperledger Besu migration readiness.
Place-Based Decisions	Drake, Tabulam, Jubullum cohort coordination; cultural-heritage routing guidance; community information briefings; Country-access protocols for geographic extension.

PART 10 — READINESS AND CONFIRMATION

42. Confirmation items

42.1 Six items to confirm before Phase 0 item 3 (Trustee decision record) is executed:

- **Item A — Cultural pre-concurrence intent.** The Caretaker Trustee confirms that Phase 0 items 1 and 2 (FNAC / JLALC / Wahlubal Elder concurrence) will run genuinely and that the programme will adapt if concurrence is declined.
- **Item B — BSP authorisation appetite.** The Foundation accepts the regulatory perimeter of being a Booking Service Provider, including SMS development, PSL remittance, and 10-year authorisation commitment.
- **Item C — Chain of Responsibility acceptance.** The Foundation accepts primary-duty exposure under HVNL for heavy-vehicle freight work and commits to executive due-diligence discipline.
- **Item D — Driver earnings model.** The Foundation commits to the zero-AUD-commission model for drivers (Foundation revenue is COG$ services fee only, not a percentage of AUD fare).
- **Item E — Fair Work voluntary standards.** The Foundation voluntarily adopts fair-fare floor, transparent fee splits, and pre-acceptance trip transparency, regardless of whether FWC orders have been made.
- **Item F — LPG integration commitment.** Corridors Freight is the coordination layer for Community LPG last-mile delivery from Phase 6 onwards.

43. Readiness statement

43.1 This document, together with the Community Electricity, Community LPG, and Community Communications planning documents, the JVPA, the CJVM Hybrid Trust Declaration, the Sub-Trust C Deed, the Godley Accounting Specification v1.0, and the Foundation's current platform source at repo cogsaustralia/Cog, constitutes a complete specification for Phase 0 execution.

43.2 The programme is larger and more regulated than any Foundation programme to date. The Foundation does not proceed lightly. Phase 0 is deliberately longer and more demanding than for prior programmes. Nothing about Phase 0 is shortcuttable.

43.3 If the Caretaker Trustee determines at any point during Phase 0 that the programme cannot proceed consistent with the Foundation's values, the MIS-exclusion posture, the cultural concurrence requirements, or the regulatory obligations, the programme is paused or cancelled. Scale and ambition are not reasons to compromise on any of these commitments.

44. Amendment history

Version	Date	Change
1.0 (Draft)	25 April 2026	Initial issue as COGS Community Song Lines (Draft for FNAC Consultation). Scope: Rides (personal transport and small-item delivery) and Freight (heavy and specialised goods movement). COGS proprietary cryptographic resource management system. Pilot at

Version	Date	Change
		Jubullum, Drake, Tabulam. Integration with Community LPG for last-mile delivery. Draft status pending FNAC and JLALC concurrence on use of the Songlines name at programme level.
1.1	25 April 2026	Structural framing revision aligning the programme with the COGS Resource Corridors (CRC) umbrella. Programme renamed to Corridors Transport and Freight, with sub-interfaces Corridors Rides and Corridors Freight. New §1A placing the programme in the CRC Transport and Freight branch. §2 reframed to reflect umbrella-level consent pathway for the Songlines name (see CRC Master Strategy §2 and §29); the programme is no longer drafted "pending concurrence" — the Corridors name is the operational name, and the Songlines name applies if umbrella-level consent is given in future. Phase 0 item 1 reframed from a programme-level gate to an umbrella-level consultation that does not gate programme delivery. Commercial model, regulatory perimeter (NSW BSP authorisation, HVNL CoR, Fair Work, rideshare GST), driver and operator earning model, LPG integration, and platform build specifications substantively unchanged. Engineering identifiers adopt the CORRIDORS-TRANSPORT-* convention; existing code references updated.
